

Clear thinking in a complex world

ICM Poll for The Observer

Fieldwork dates: 8th-22nd September

Interview Method: Face-to-face

Population effectively sampled: All adults aged 18+ in GB

Sampling Method: Sampling locations were selected within each Government Office Region using a random stratified approach with selection proportionate to size.

Sample size: 1044 adults aged 16+

Data weighting: Data were weighted to the profile of all adults aged 16+. Data were weighted by sex, age, social class, household tenure, work status, number of cars in the household and whether or not respondent has taken a foreign holiday in the last 3 years. Targets for the weighted data were derived from the National Readership survey, a random probability survey comprising 34,000 random face-to-face interviews conducted annually.

Questions: The computer tables attached in PDF format show each question, in full, in the order they were put to respondents, all response codes and the weighted and un-weighted bases for all demographics and other data including but not limited that published .
